

Government Rebates for LED Light installations

IPart and VEET Schemes

iPart and VEET are the two energy saving initiatives from the NSW and Victorian Governments (respectively). Both iPart and VEET schemes are designed to make energy improvements more affordable by generating credits for energy saving activities.

In terms of lighting, the number of credits generated is dependent on a calculated energy saving made from using approved energy efficient lighting products.

Fundamentally, both schemes operate by legislatively requiring energy retailers to surrender a specified number of certificates each year. The certificates are produced by undertaking prescribed energy saving activities. These certificates can then be sold in a competitive market for energy retailers to purchase in order to meet their requirements.

Approved Products

Tortech Lighting has a number of products approved under both the NSW and Victorian schemes. Tortech is continually submitting new products for approvals, if you require a particular product to be approved, please contact us to discuss your individual needs.
